

Wheel Hub Bearing Assembly

This wheel hub bearing assembly provides a secure and rotating interface between the wheel and the vehicle's suspension. It allows the wheel to spin smoothly and connects it to the axle, also providing mounting for the brake rotor and caliper.

Product Overview

Precision Wheel Hub Bearing Assembly

This wheel hub bearing assembly is a critical automotive component engineered for smooth wheel rotation and structural integrity. It features a pre-pressed bearing within a durable steel housing, ensuring ease of installation and long-term reliability. Designed to support vehicle weight and integrate seamlessly with suspension and braking systems, this assembly provides a secure interface between the axle and the wheel.

Technical Specifications

Model ID	E05102F36
Mounting Pattern	Three-bolt mounting
Material	Durable Steel, Corrosion-resistant coating

Quality Assurance

Manufacturing Standards

- Scientific and complete quality system
- Strict and precise processing technology
