Product Overview

Whole-House Water Softening Solution

This whole-house water softener system is designed to provide softened water throughout your entire home by utilizing advanced ion exchange technology. It effectively removes hardness minerals such as calcium and magnesium, which helps prevent scale buildup in your plumbing and extends the lifespan of your household appliances. With its sleek, modern design and compact footprint, this system integrates seamlessly into various home environments while offering easy monitoring via an integrated control panel.

Technical Specifications

System Components

- Resin bead tank
- Brine tank for regeneration
- Integrated control panel

Key Features

Scale Prevention • Compact Design • Easy Monitoring • Appliance Protection

Application

Residential, Whole-House, Kitchen

Filtration Technology

Ion Exchange

Installation & Maintenance

Installation Requirements

- Connects to main water line
- Suitable for tight spaces
- Requires periodic salt replenishment
