

Wind Generator

This wind generator converts wind energy into electricity. It features a nacelle that houses the generator and rotor blades for capturing wind energy.

Product Overview

DF77-1500 Wind Energy Solution

The DF77-1500 is a high-performance wind generator designed to capture kinetic energy with exceptional efficiency. This unit integrates a robust nacelle housing critical generation components with aerodynamic rotor blades for optimal power output. Engineered for professional renewable energy applications, it provides a reliable solution for wind power projects.

Technical Metrics

Rated Power Capacity

1500 kW

Rated Power Output

Model Number	DF77-1500
Design Features	Aerodynamic Blades, Industrial Nacelle, High Efficiency
