

Wired and Wireless ADSL Router

This ADSL router provides reliable wired and wireless network connectivity. It features advanced security protocols, Quality of Service (QoS) for optimized bandwidth allocation, and easy setup via web-based interface.

Product Overview

Professional Connectivity Solution

This high-performance ADSL router is engineered to provide reliable wired and wireless network connectivity for professional environments. Designed for home or small office use, it supports multiple simultaneous device connections while maintaining stable internet access. With integrated advanced security protocols and QoS optimization, it ensures a secure and efficient networking experience.

Key Features

Core Features

- Wired and wireless network support
- Quality of Service (QoS) for bandwidth optimization
- Advanced network security protocols
- Easy web-based interface setup

Technical Standards

Typical Application

Home Office, Small Business, Reliable Internet Access
