

Wired Network Communication Interface Device

This wired network communication interface device enables data transfer within a network. It features multiple connection ports for versatile connectivity.

Overview

Wired Network Communication Interface

This wired network communication interface device is engineered for reliable data transmission and seamless system integration. Featuring a robust design with a precision-engineered grid pattern and multiple connection ports, it ensures stable connectivity for complex network environments. Its compact form factor is specifically optimized for space-constrained installations where high-density pin connectivity is required.

Physical Dimensions

Device Width	85 mm
Mounting Hole Spacing	25 mm
Component Height	11.5 mm
Connector Depth	36 mm
Pin Pitch	3.5 mm
Dimensional Scale	2:1

Connectivity

Port Configuration	Multi-port, Grid Pattern, Pin Array
