

Wireless Network Router

This device complies with IEEE 802.11n standards. It is also backwards compatible with 802.11b/g.

Overview

High-Performance Connectivity

This wireless network router is engineered for professional-grade connectivity and extended signal range. Its compact, portable design ensures flexibility for various work environments, while compatibility with multiple operating systems guarantees seamless integration into existing infrastructures. The inclusion of a detachable antenna allows for optimized signal strength and customized positioning to meet specific networking requirements.
