Product Overview

Professional Wood Waste Management

The WC42 is a robust and efficient agricultural machine designed for processing wood waste into manageable chips. It features a heavy-duty construction with hardened steel blades, ensuring reliable performance in demanding environments like farms, landscaping sites, and forestry operations. With its large feed hopper and adjustable discharge chute, this chipper provides an ideal solution for creating mulch to conserve soil moisture or clearing storm debris.

Key Features

Highlights

- Hardened steel blades for long-lasting performance
- Adjustable discharge chute for precise chip placement
- Large hopper for easy feeding of branches and logs
- Compact design for high mobility across work sites

Safety & Compliance

Safety Equipment

Emergency stop controls, Protective guards

Application

Suitable Applications

Farming • Landscaping • Forestry Management • Garden Waste Processing
