

Wood Thicknessing Planer

This woodworking planer accurately reduces wood thickness. It features a flat work table, adjustable columns, and an enclosed cutterhead for safety.

Product Overview

Professional Wood Thicknessing Solution

The Wood Thicknessing Planer is a heavy-duty industrial machine engineered for precise thicknessing of timber. Designed for professional woodworking environments, it features robust construction with a large, stable work table supported by high-accuracy adjustable columns. The machine integrates essential safety features including an enclosed cutterhead and a dedicated emergency stop system, ensuring efficient and secure operation in industrial production.

Technical Specifications

Safety Systems

- Enclosed cutterhead guard
- Emergency stop button
- Intuitive control panel

Operational Mechanism

Industrial • Automated Feed

Model ID	MB107A
Key Features	Heavy-duty, Adjustable height, Enclosed cutterhead, Automatic feed
