

Wooden Cable Reel Production Line

This machine line transforms wood waste, such as blocks, logs, used pallets, and bamboo, into cable drums. The system is designed for the production of compressed cable packages and wooden cable reels through material processing and final product assembly.

Product Overview

Industrial Wooden Cable Reel Production Line

This production line offers an efficient solution for manufacturing durable cable reels and compressed wood cable packages from wooden waste materials like blocks, logs, and bamboo. The system integrates specialized flange and neck press machinery to create water-resistant components suitable for outdoor storage. By utilizing wood fiber waste, this equipment promotes sustainable manufacturing practices while ensuring high-quality, reliable packaging solutions for cable products.

Technical Specifications

Production Diameter Range

- 800
- 900
- 1000
- 1100
- 1200
- 1300

Core Equipment Units

- Cable flange press machine
- Cable neck press machine

Compatible Raw Materials

Wood blocks, Wood logs, Used pallets, Bamboo waste, Wood fiber waste

Key Features

Product Performance

Water-proof finish • Outdoor storage capable • Compressed fiber construction
