

# 0-25mm Painted Frame Micrometer

This precision measuring instrument accurately determines external dimensions of objects. It features a robust painted frame and finely threaded spindle for precise readings.

## ADDITIONAL IMAGES

## Overview

### Precision Outside Micrometer

This 0-25mm outside micrometer is a precision instrument designed for accurate external dimension measurement. Built with a robust painted frame for durability and corrosion resistance, it features carbide-tipped measuring faces to ensure longevity and consistent performance. It is an essential tool for engineering, manufacturing, and quality control applications requiring high-precision readings.

## Technical Specifications

### Measuring Range

**0 mm**

Min Range

**25 mm**

Max Range

### Resolution

0.01 mm

## Design & Build

### Key Features

- Painted frame for corrosion resistance
- Carbide tipped measuring faces
- Locking mechanism for spindle security
- Hardened steel thimble and sleeve

### Frame Type

Painted

### Measuring Faces

Carbide tipped

## Applications

### Primary Applications

Engineering, Manufacturing, Quality Control
