

# 10 kW Electric Welding Power Supply

This 10 kW electric welding power supply is designed for industrial welding applications. It features a robust construction with efficient cooling and multiple output connectors.

## Overview

### Industrial 10 kW Electric Welding Power Supply

This robust electric welding power supply is designed for demanding industrial applications, featuring a durable construction with an integrated finned housing for optimized cooling. It provides reliable DC output for versatile welding operations and is engineered for easy integration into various professional setups. The unit is specifically compatible with 186F engines, ensuring consistent performance for heavy-duty tasks.

## Power Generation

### Generation Performance

<b>3 kW</b> Rated Power	<b>300 A</b> Rated Welding Current
----------------------------	---------------------------------------

Rated Voltage	220/240 V
Rated Frequency	50/60 Hz

## Welding Specifications

No-load Voltage (DC)	65 V
Rated Welding Current (DC)	300 A

## Technical Design

### Brush Configuration

Brushed

### Key Features

- Robust industrial construction
- Multiple output connectors
- Integrated wiring for versatile operations
- Compact design for easy integration

Engine Compatibility	Suitable for 186F
Cooling Method	Finned housing for efficient thermal management
