

100000 CBM Gas Storage Holder

Large capacity gas holder designed for storing 100,000 cubic meters of gas. It features a cylindrical structure with horizontal support beams and external staircase for access and maintenance, making it suitable for industrial gas storage applications.

Overview

Industrial Gas Storage Solution

This large-scale gas holder is engineered for high-volume storage, offering a capacity of 100,000 cubic meters. Designed with a robust cylindrical structure, it features reinforced horizontal support beams and an external staircase to facilitate safe access and routine maintenance. It is an ideal infrastructure solution for demanding industrial gas storage applications requiring reliability and significant volume.

Technical Specifications

Storage Capacity

100000 CBM
Volume

Structural Features

- Cylindrical design
- Horizontal support beams
- External maintenance staircase

Application

Primary Application

Industrial Gas Storage, Large-Scale Infrastructure
