

10x50 Binocular Telescope

This high-magnification optical instrument is designed for long-distance observation. It features 10x magnification and 50mm objective lenses for enhanced light gathering.

Product Overview

Professional 10x50 Optical Observation

This high-magnification optical instrument is engineered for precision long-distance observation. Featuring a 10x magnification capability paired with 50mm objective lenses, it ensures superior light gathering for crisp, clear imaging. Its durable construction is optimized for demanding outdoor environments, making it a versatile tool for bird watching, astronomy, and surveillance.

Technical Specifications

Key Features

- Adjustable focus system
- Interpupillary distance adjustment
- High light-gathering capacity
- Durable outdoor-ready build

Magnification	10 x
Objective Lens Diameter	50 mm
Typical Applications	Bird Watching, Astronomy, Surveillance
