

110 Voice Grade Patch Panel

This high-density 110 voice panel is designed for telecommunications and networking environments. It provides a solution for terminating and distributing voice circuits, ensuring reliable communication.

Product Overview

High-Density Voice Connectivity

This 110 voice grade patch panel is engineered for efficient and organized voice connectivity in telecommunications and networking environments. It provides a robust solution for terminating and distributing voice circuits, ensuring clear and reliable communication. Constructed with high-quality, cold-rolled steel, the panel is designed for durability and ease of use in demanding installations.

Physical Characteristics

Material	Cold-rolled steel plate
Surface Finish	Electrostatic spraying

Features

Design Advantages

- Durable construction
- Clearly labeled ports
- Simplified cable management
- Easy troubleshooting
