

110 Wiring Block for Network Cables

This wiring block is designed for terminating and cross-connecting network cables. It provides high-density connectivity and structured cable management within modern communication infrastructures.

Overview

High-Density Connectivity Solution

The 110 wiring block is a critical component for telecommunications and data networking, designed to facilitate the efficient termination and cross-connection of network cables. Featuring robust construction, this block ensures reliable signal transmission and long-term performance in demanding infrastructure environments. Its insulation displacement connector (IDC) design allows for quick, reliable connections without the need for wire stripping, making it an essential tool for structured cabling systems.

Technical Specifications

Key Features

- High-density connectivity
- No wire stripping required
- Robust construction for durability
- Facilitates organized cross-connection

Termination Type	Insulation Displacement Connector (IDC)
Primary Applications	Telecommunications, Data Networking, Structured Cabling
