

12-inch 2-Way Powered Line Array Loudspeaker

This powered loudspeaker has a built-in amplifier module providing 1750W of peak power. Its Differential Drive woofer maintains a lightweight profile.

Overview

Professional Line Array Solution

This powered, compact 12-inch two-way line-array speaker system is engineered for high-performance sound reinforcement in small to medium-sized venues. Featuring a sophisticated Constant Curvature Waveguide, it ensures exceptional array coherence and coverage. Built for professional reliability, the unit utilizes premium birch plywood construction and a rugged finish, making it an ideal choice for scalable sound systems.
