

1254 Tractor with Hydraulic Output

The 1254 tractor is designed for heavy agricultural tasks. It features a powerful engine and hydraulic system with one pair hydraulic output.

Overview

High-Performance Agricultural Tractor

The 1254 Tractor is a robust agricultural machine engineered for demanding farm environments. It features a powerful engine and a flexible 12-forward/4-reverse gear system, ensuring stable and reliable performance. With advanced hydraulic capabilities, independent PTO options, and a large-capacity fuel tank, this tractor is built to handle heavy agricultural implements for extended operational periods.

Engine & Drivetrain

Gear Configuration	12 forward shifts, 4 reverse shifts
Differential	4 planetary wheeled differential
Fuel Tank Volume	230 L

Hydraulics & PTO

PTO Rotation Speeds

- 540
- 760
- 850
- 1000

Hydraulic Output Pairs	1 or 2 pairs available
Lifting System	Force control, Position control, Floating control

Safety & Control

Braking System

Pedal operated hydraulic driving brake • Hand shank mechanical parking brake

Steering	Independent oil circuit hydraulic steering
