

125cc Four-Stroke Single Cylinder Engine

This 125cc four-stroke engine is a single-cylinder engine commonly found in scooters and ATVs. It has a forced air-cooled system and provides a balance of power and fuel efficiency.

Overview

Reliable 125cc Four-Stroke Engine

The 125cc four-stroke single-cylinder engine is a versatile power unit designed for scooters, ATVs, and small recreational vehicles. Featuring a forced air-cooled system, this engine is engineered for a balance of consistent power output and fuel efficiency. Its compact design and robust construction ensure ease of maintenance, making it an ideal choice for urban transportation applications.

Technical Specifications

Engine Type	Four-stroke, single cylinder
Displacement	125 cc
Cooling System	Forced air-cooled

Performance & Features

Suitable Applications

- Scooters
- ATVs
- Small recreational vehicles
- Urban transportation

Key Features

Automatic Transmission, Electric Starter, Carburetor System
