

12V 100Ah Rechargeable Lead Acid Battery

This is a 12V 100Ah rechargeable lead acid battery. It is designed for constant voltage charging and has specific voltage regulation for standby and cycle use.

Product Overview

Reliable Energy Storage Solution

This 12V 100Ah rechargeable valve-regulated lead-acid battery is designed for consistent performance in demanding power applications. It is engineered for both standby and cycle use, making it an ideal choice for UPS systems and solar energy storage setups. With a robust build and clear operational guidelines, this unit ensures dependable power delivery when you need it most.

Technical Specifications

Rated Voltage	12 V
Capacity	100 Ah
Weight	29 kg

Charging Parameters

Charging Specifications

13.7 V Standby Voltage	14.7 V Cycle Voltage	30 A Max Initial Current
----------------------------------	--------------------------------	------------------------------------

Applications

Primary Applications	UPS, Solar System
----------------------	-------------------

Safety & Handling

Safety Guidelines

- Avoid short circuits
- Do not disassemble or incinerate
- Do not heat above 50°C
- Recharge after use
- Must be recycled or disposed of properly
- Do not charge in a sealed container
