

12V Lead-Acid Car Battery

This lead-acid car battery provides a 12V power source for starting vehicle engines. It is constructed with lead plates and a durable plastic top cover that includes terminals for connecting to the vehicle's electrical system.

Product Overview

Reliable Starting Power

The 6-QA-80 is a high-performance lead-acid battery engineered to deliver consistent starting power for automotive engines. Featuring a robust construction with multi-cell architecture, it utilizes lead plates immersed in an electrolyte solution to ensure durability and longevity. This 12V unit is designed to reliably power both engine ignition systems and essential vehicle electrical components.

Technical Specifications

Voltage	12 V
Capacity	80 Ah
Model Code	6-QA-80

Construction & Design

Battery Type

Lead-Acid • Automotive

Key Features

- Robust multi-cell construction
- Durable plastic top cover
- Standardized terminal connections
- Lead plate electrolyte system
