

13 Input 8 Output Cascade Satellite Multi-switch

This satellite multiswitch distributes both satellite and terrestrial signals. Cascade functionality allows for expanding the distribution network by connecting multiple units.

Product Overview

Professional Satellite Distribution

The MS-1308LC is a professional-grade satellite multiswitch engineered for distributing satellite and terrestrial signals across multi-dwelling units and large residential installations. Featuring 13 inputs and 8 outputs, this unit supports cascade functionality, allowing for scalable network expansion. It is built with a high-quality tinplate housing and professional amplification circuitry to ensure low signal loss and reliable performance.

Technical Specifications

External Power

20 V

Voltage

2000 mA

Current

Satellite/Terrestrial Inputs	13
Subscriber Outputs	8
DiSEqC Support	DiSEqC 1.0, DiSEqC 2.0

Features

System Highlights

- Professional amplification design
- Low insertion loss
- Cascade functionality for network expansion
- Stable operation with external DC power

Housing Material	Tinplate housing with plastic case shell
