

13500kW Three-Phase Synchronous AC Motor

This three-phase synchronous AC motor provides 13500kW of power. It is designed for demanding environments and optimal efficiency in electric power transmission and distribution systems.

Overview

High-Power Industrial Performance

This 13500kW three-phase synchronous AC motor is engineered for heavy-duty industrial applications requiring exceptional power and reliability. Designed for demanding environments, it features robust construction and advanced cooling systems to ensure operational stability. It is an ideal solution for electric power transmission systems as well as driving large-scale pumps and compressors.

Technical Specifications

Rated Power

13500 kW
Rated Power

Motor Type

Three-Phase Synchronous AC Motor

Features

Key Features

- Advanced cooling system
- Robust heavy-duty construction
- Precision control capabilities
- High efficiency

Applications

Suitable Applications

Electric Power Transmission, Distribution Systems, Large Pumps, Compressors

Compliance

Performance Standards

Performance Standard Compliant • Safety Standard Compliant
