

# 1.4539/904L Stainless Steel Weld Neck Flange

This weld neck flange is constructed from 1.4539/904L grade stainless steel. It is designed according to ANSI B16.5 standards for butt welding applications.

## Product Overview

### High-Performance 904L Weld Neck Flange

This 1.4539/904L stainless steel weld neck flange is engineered for demanding industrial piping systems where superior corrosion resistance is critical. Designed in accordance with ANSI B16.5 standards, it features a butt-weld connection type that ensures a robust, leak-proof joint. This component is an ideal solution for high-corrosion environments, providing long-term durability and reliability in complex piping architectures.

## Technical Specifications

Material Grade	1.4539 / 904L Stainless Steel
Standard	ANSI B16.5
Connection Type	Butt Weld
Flange Type	Weld Neck

## Key Features

Application Suitability	High-Corrosion Environments, Industrial Piping, Butt-Weld Systems
