

15000-Ton Cement Production Plant

This is a large-scale cement plant with a production capacity of 15000 tons. It features silos, a clinker production unit, and conveyor systems for efficient cement manufacturing.

Overview

High-Capacity Cement Production Facility

This large-scale industrial cement production plant is engineered for high-volume output, capable of producing 15,000 tons of cement. The facility integrates essential infrastructure including raw material storage silos, clinker production units, and advanced conveyor systems for efficient material handling. Designed as a comprehensive manufacturing solution, it provides the necessary processing and auxiliary structures for modern, integrated cement production.

Capacity & Performance

Production Capacity

15000 tons

Daily Output

Facility Infrastructure

Core Infrastructure Components

- Raw material storage silos
- Rotary kiln area (clinker production)
- Conveyor material handling systems
- Exhaust chimney stack
- Administrative & processing units
