

# 15kV Outdoor Distribution Fuse Cutout

Outdoor expulsion drop-out type distribution fuse cutouts protect power systems from overload and short-circuit failures. This device is rated for 15kV and provides high over-current protection with a high breaking current.

## Overview

### Reliable Distribution Protection

This 15kV Outdoor Expulsion Drop-out Fuse Cutout is engineered to protect power distribution systems from overload and short-circuit failures. Designed for outdoor applications, it features high over-current protection capabilities and exceptional mechanical strength to ensure long-term reliability. The unit is strictly tested to meet international standards, providing a robust safety solution for electrical networks.

## Electrical Ratings

### Performance Metrics

<b>15 kV</b> Nominal Voltage	<b>17 kV</b> Maximum Voltage	<b>100 A</b> Rated Current
---------------------------------	---------------------------------	-------------------------------

Application Range	11kV - 27kV
-------------------	-------------

## Technical Standards

Compliance	IEC 600282-2
------------	--------------

## Key Features

### Main Advantages

- High over-current protection capability
- High breaking current capacity
- High industrial frequency withstand voltage
- Superior mechanical strength
- Strict quality control and testing

## Logistics & Supply

### Shipping & Delivery

Parameter	Details
Standard Lead Time	35 days (depends on quantity)
Loading Ports	Ningbo, Shanghai, or any China port
Payment Methods	T/T, L/C
Shipping Options	Sea, Air, or Express

Packaging Specification	1 unit per carton with foam lining, palletized for shipping.
-------------------------	--

Customization	Yes
