

15kWp Solar Energy System

This solar generator system has a 15kWp capacity. Installed in August 2008, the system utilizes CS6A-170P modules.

System Overview

Professional Solar Energy Solution

This 15kWp solar energy system is engineered for high-efficiency power generation, utilizing advanced photovoltaic modules for optimal energy capture. Originally installed in 2008, the system is designed to provide a sustainable and reliable source of electricity for commercial or large-scale residential applications. Its robust design allows for effective integration into various environments, supporting long-term energy independence.
