

16-Port Ethernet Network Switch

This 16-port Ethernet network switch is designed for small to medium-sized networks. It provides high-speed data transfer capabilities for connecting multiple devices such as computers, printers, and servers.

Overview

High-Performance Network Connectivity

The 16-Port Ethernet Network Switch is designed to provide reliable and efficient data transfer for small to medium-sized network environments. Supporting standard Ethernet protocols and featuring auto-negotiation, this switch ensures optimal performance when connecting multiple devices such as computers, servers, and printers. Its compact form factor allows for flexible installation, making it an ideal solution for streamlined network management.

Technical Specifications

Model ID

ST2000-M

Port Configuration

16 ports

Device Type

Ethernet Network Switch

Key Features

Auto-negotiation, Standard Ethernet Protocol Support, Compact Design
