

# 1800W 110mm Core Drilling Machine

This 1800W core drilling machine is designed for precise and efficient core drilling. It features a robust motor that delivers high torque for drilling through tough materials, and it supports core bits up to 110mm in diameter.

## Product Overview

### Professional Core Drilling Performance

This 1800W diamond drilling machine is engineered for high-performance core drilling in demanding construction environments. With a robust motor capable of handling tough materials like concrete, brick, and stone, it provides the high torque necessary for precise and efficient results. An integrated water cooling system is included to minimize dust generation and significantly extend the lifespan of your diamond core bits.

## Technical Specifications

|                       |        |
|-----------------------|--------|
| Power Output          | 1800 W |
| Max Drilling Diameter | 110 mm |

## Features

### Design Highlights

- Ergonomic handle for comfortable operation
- High-torque motor for tough materials
- Dust reduction via water cooling
- Precise control for professional applications

|                      |                        |
|----------------------|------------------------|
| Cooling System       | Yes                    |
| Compatible Materials | Concrete, Brick, Stone |
