

180mm Flap Disc with Aluminum Oxide Abrasive

This flap disc is designed for grinding and finishing applications. It features an aluminum oxide abrasive for effective material removal and a long lifespan.

Product Overview

High-Performance Abrasive Flap Discs

These flap discs feature high-quality aluminum oxide abrasive grains, designed for efficient material removal and consistent finishing results. Engineered for durability and a long service life, they are suitable for various grinding and finishing applications. With multiple size and grit configurations available, these discs provide versatility for professional metalworking and surface preparation tasks.

Technical Specifications

Compliance

EN13743

Performance Metrics

8600 RPM

Max Operating Speed

80 m/s

Max Peripheral Speed

Abrasive Material

Aluminum Oxide

Available Configurations

Size and Grit Availability

Diameter (mm)	Bore (mm)	Available Grits
