

196cc 5.5HP Air-Cooled Gasoline Engine

This single-cylinder, 4-stroke gasoline engine features air cooling. It is commonly used in generators, water pumps, and other small engine applications.

Product Overview

Professional Grade 196cc Gasoline Engine

The 196cc 5.5HP air-cooled gasoline engine is a robust, single-cylinder, 4-stroke power plant designed for versatility and reliability. It features a dependable recoil starting system paired with a transistorized magneto ignition for consistent performance under various operating conditions. Ideally suited for heavy-duty applications, this engine provides steady output for equipment such as portable generators, water pumps, and other small machinery.

Technical Specifications

Maximum Power Output

5.5 HP

Power

3600 RPM

Speed

Cooling System

Air-Cooled

Displacement

196 cc

Compression Ratio

8.5:1

Operational Features

Starting Method

Recoil Start

Ignition System

Transistorized Magneto

Applications

Recommended Applications

- Generators
- Water pumps
- Small machinery
