

1U Cable Management Panel with Retainers

This 1U cable management panel is designed for organizing cables in server racks and cabinets. It features cable retainers to secure and separate cables, which prevents tangling and improves airflow.

Overview

Professional Cable Organization

The 1U Cable Management Panel is an essential component for maintaining organized and efficient network installations. Designed for standard server racks and cabinets, this panel features multiple retainers that effectively secure and separate cables, preventing tangling while promoting optimal airflow. Its durable metal construction with a sleek black finish ensures long-term reliability and a professional aesthetic for your data center or server room.
