Overview

Professional 2000L Craft Brewing Solution

This 2000L craft beer brewing system is a comprehensive production line designed for commercial beer plants, brewpubs, and microbreweries. Constructed from high-quality SUS304 stainless steel or red copper, it offers a durable and hygienic environment for producing a wide variety of beers including Lagers, Ales, and Stouts. The system is highly customizable to meet specific site requirements and includes full-service support from installation to after-sales care.

Technical Specifications

Batch Capacity

2000 L

Standard Batch

5000 L

Max Scope

Primary Materials

SUS304 Stainless Steel, Red Copper, Food Grade

System Components

Main Brewing Systems

System Name	Specification / Scope
Brewhouse System	Capacity 100L-5000L per batch
Fermentation System	6-12 fermenters or customized
Chilling System	2 pieces of refrigeration machine
Cleaning System	Stainless steel trolley with 1-2 tanks
Control System	Semi-auto (digital) or Full-auto (PLC)

Brewing Capabilities

Supported Beer Styles

- Lager
- Ale
- Stout
- Bock
- Porter
- Fruit/Juice Beer
- Wheat Beer

Required Ingredients

Malt, Yeast, Hops, Water

Applications

Target Applications

Restaurant • Hotel • Brewpub • Micro Brewery • Laboratory • Scientific Research

Logistics & Installation

Logistics Services

- Sea freight delivery management
- Professional export packaging
- Timely delivery guarantee
- Overseas installation training available

Shipping Container Requirement

One 20' or 40' HQ container required depending on configuration

Process Workflow

Production Process Steps

- Malt Milling
- Brewhouse Wort Production
- Steam Heating
- Plate Heat Exchanging
- Fermentation
- Cooling & Maturation
- Dispensing/Selling
