

2000W Convector Heater with Adjustable Thermostat

This convector heater offers three heating power options up to 2000W and adjustable thermostat control. It features overheat protection and fan assistance for uniform heat distribution.

Product Overview

Efficient Convection Heating

The NDG200 convector heater is a professional-grade space heating apparatus designed for efficient and safe room climate control. Featuring a robust finned heating element within a ventilated metal body, it promotes natural convection for even, consistent heat distribution throughout any space. With adjustable thermostat controls and multiple power settings, users can precisely customize heat output to meet their specific environmental requirements.

Technical Specifications

Power Output

2000 W

Maximum Power

Heating Element	Finned heating element
Distribution Method	Natural convection

Features & Control

Thermostat	Adjustable
Safety Features	Overheat protection, Stable base, Anti-tip design

Design & Build

Body Construction	Ventilated metal
Portability	Yes
