

20K Flanged Globe Valve

This globe valve is designed to meet JIS (Japanese Industrial Standards). It is rated for 20K pressure and features flanged ends for secure connection in piping systems.

Overview

Industrial Flow Control

This JIS (Japanese Industrial Standards) globe valve is engineered for demanding industrial environments requiring precise flow regulation. Constructed from durable WCB (Weldable Cast Steel), this valve is built to withstand high-pressure and high-temperature conditions. Its robust flanged design ensures a secure, leak-resistant connection within piping systems, while the manual handwheel allows for accurate control over fluid flow rates.

Technical Specifications

Pressure Rating

20 K

Pressure Class

Standard

JIS

Body Material

WCB (Weldable Cast Steel)

Connection Type

Flanged

Operation

Manual Handwheel
