Project Overview

Viana-Luanda Sul 220KV Line

The Viana-Luanda Sul 220KV power transmission line represents a critical infrastructure development in Angola. As the country's first 220KV double-circuit transmission line, it is engineered to provide essential power supply to the new district of Luanda. This project plays a vital role in enhancing the quality of life for residents and fostering economic development in the region.

Technical Specifications

Voltage Rating

220 KV
Voltage

Circuit Configuration

Double Circuit

Infrastructure Type

High-Voltage, Transmission Line, Lattice Tower
