

2250mm Hot Strip Mill for Steel Production

This 2250mm hot strip mill is designed for the continuous rolling of steel strips. It is equipped with advanced control and safety systems, ensuring efficient production of high-quality steel strips for various industrial applications.

Product Overview

Heavy-Duty Hot Strip Mill

This 2250mm hot strip mill is a robust industrial solution designed for the continuous rolling of high-quality steel strips. Engineered for precision and efficiency, the system incorporates advanced control systems and automated material handling to streamline production workflows. The mill features a heavy-duty framework equipped with hydraulic adjustment capabilities and comprehensive safety mechanisms to ensure reliable performance in demanding industrial environments.

Technical Specifications

Mill Width	2250 mm
Primary Application	Steel Strip Production

Key Features

Core Components

- Multiple rolling stands
- Hydraulic adjustment cylinders
- Automated conveyor system
- Advanced control interface

Operational Capabilities	Continuous Rolling, Automated Handling, Precision Adjustment, Safety Integrated
--------------------------	---
