

22mm Digital LED Indicator Light

This digital LED indicator light has an IP65 protection grade, with options up to IP67. It operates on a frequency of AC50~60Hz.

Product Overview

High-Visibility Digital Monitoring

This 22mm digital LED indicator light is engineered for precise electrical parameter monitoring in transmission and distribution panels. Its compact design ensures seamless integration into various industrial equipment, while the bright LED display provides clear, real-time visibility. Built for reliability, this unit is designed to withstand challenging environments with robust ingress protection.
