

22mm Waterproof Pushbutton Switch for Elevator Control

This 22mm pushbutton switch is designed for elevator control applications. Its waterproof construction and plastic housing ensure reliable performance.

Product Overview

Professional Elevator Control Solution

This 22mm waterproof pushbutton switch is engineered for high-reliability control circuits in demanding environments such as elevator systems, distribution cabinets, and industrial power stations. Constructed with a robust plastic housing and specialized silver alloy contacts, it offers superior resistance to electrical erosion and environmental wear. Compliant with international IEC and GB/T standards, this component ensures safety and consistent performance for signal and interlocking applications.

Technical Specifications

Specializing in production of buttons and indicators since 1997

High-durability 22mm pushbutton switch suitable for industrial and elevator control systems.

Mechanical Life

1000000 cycles
Pushbutton

500000 cycles
Selector Switch

Suitable Environments

- Elevator Control Panels
- Distribution Boxes
- Power Stations
- Communication Networks
- Industrial Control Cabinets

Rated Insulation Voltage	600 V
Conventional Heating Current	10 A
Insulation Resistance	e5M©
Contact Resistance	d25©
Withstand Voltage	AC 2.5KV/min

Certifications & Standards

Compliance

CE, RoHS, UL, IEC60947-5-1, ISO9001
