

# 230V AC Surge Protection Device with LED Indicator

This surge protection device (SPD) protects electrical systems and equipment from transient overvoltages. It features an LED indicator to show operational status and a test button to verify functionality.

## ADDITIONAL IMAGES

## Overview

### Professional Signal and Indicator Module

This modular signal lamp is designed for 230V AC circuits, providing reliable visual indication in industrial and automation systems. Its compact modular design ensures easy installation on standard DIN rails while maintaining low power consumption. With options for LED or neon illumination and a long operational lifespan, this device offers a robust solution for monitoring electrical circuit status.

## Technical Specifications

Rated Voltage	230 V
Rated Frequency	50/60 Hz
Connection Terminal	Pillar terminal with clamp

## Illumination Options

### Performance Comparison

Model	Illumination	Max Power	Service Life
SL	LED	0.6	30000
SN	Neon bulb	1.2	15000
JVA16	LED	0.6	30000

## Features and Certifications

### Compliance

CE

### Key Features

Modular Design, Compact Size, LED Indicator, DIN Rail Mountable, Low Power Consumption
