

24 g/h Ozone Generator for Air Purification

This ozone generator produces 24g/h of ozone and operates on 220V with 1000W power consumption. It utilizes air as its source for ozone production, making it suitable for ozone sterilization and deodorization.

Product Overview

High-Efficiency Ozone Purification

This industrial-grade ozone generator is designed for effective air purification and sterilization. With a robust ozone output of 24g/h, it is engineered to handle demanding environments requiring deodorization and sanitation. The unit operates on a 220V power supply and utilizes ambient air as its source for ozone production.

Technical Specifications

Ozone Output

24 g/h

Ozone Output

Power Consumption	1000 W
Input Voltage	220V
Gas Source	Air
