

2.4 GHz 3dBi WiFi Terminal Antenna with SMA Male Interface

This 2.4 GHz WiFi terminal antenna has good VSWR. Its small dimensions and light structure facilitate easy installation, and it demonstrates good shockproof and anti-aging performance.

Overview

High-Performance Wireless Connectivity

This 2.4 GHz terminal antenna is engineered to provide robust and reliable wireless connectivity for routers and networking equipment. With a 9dBi gain, it significantly enhances signal range and stability, making it an ideal solution for improving wireless performance in homes, offices, and industrial environments. Its durable construction and wide operating temperature range ensure consistent, high-quality signal transmission in diverse conditions.

Technical Specifications

Key Performance Metrics

9 dBi Gain	50 W Max Input Power	50 Ω Impedance
----------------------	--------------------------------	--------------------------

Frequency Range	2400-2483 MHz
VSWR	1.8 ratio
Polarization	Vertical

Physical Characteristics

Dimensions	13x 380 mm
Weight	35 g
Connector Type	RP SMA Male

Environmental

Operating Temperature	-40°C to +80°C
-----------------------	----------------

Compliance

Certifications	ROHS, ISO
----------------	-----------
