

24-Hour Electro-Mechanical Timer

This electro-mechanical timer controls electrical circuits based on a 24-hour cycle. It features a rotating dial with time markings and pins to set on and off times, and is designed for 110-120VAC operation.

Product Overview

24-Hour Electro-Mechanical Control

This electro-mechanical timer provides precise control over electrical circuits based on a standard 24-hour cycle. Featuring an intuitive rotating dial design, users can easily set specific on and off times using mechanical pins. It is an ideal solution for automating lighting systems, HVAC components, and various industrial or residential electrical processes.

Technical Specifications

| | |
|-------------------|------------|
| Operating Voltage | 110-120VAC |
| Frequency | 60 Hz |
| Timing Cycle | 24-Hour |

Features

Typical Applications

- Lighting Control
- HVAC Systems
- Automated Processes

Core Functionalities

Time Setting, Manual Override, Cyclic Automation
