

## 24-Hour Mechanical Time Switch

This mechanical time switch automatically controls electrical circuits based on a pre-set schedule. It features a rotating dial with tappets to define on/off times and is designed for panel mounting, utilizing a 24-hour cycle.

### Product Overview

#### Reliable Automated Control

The 24-Hour Mechanical Time Switch is a robust solution designed for precise electrical circuit automation. Featuring an intuitive rotating dial with adjustable tappets, it allows users to easily define specific on/off schedules throughout the day. This device is ideal for streamlining operations in lighting control, HVAC systems, and various industrial applications requiring consistent time-based switching.

### Technical Specifications

|                |                                   |
|----------------|-----------------------------------|
| Cycle Duration | 24 Hours                          |
| Mounting Type  | Panel Mount                       |
| Mechanism      | Mechanical dial with tappets/pins |
