

24-Hour Mechanical Timer Switch

This mechanical timer switch automates electrical devices using a 24-hour dial. It is designed for daily or weekly programming, offering flexibility for various applications.

Product Overview

Efficiency and Control

The TH-187 is a professional-grade 24-hour mechanical timer switch engineered for the seamless automation of various electrical systems. It features an intuitive dial interface that allows users to set precise on/off schedules throughout the day, providing reliable control over lighting, heating, and other critical appliances. Its robust design is built to withstand continuous daily use, making it an ideal solution for businesses looking to enhance energy management and operational convenience.

Technical Specifications

Cycle Duration	24 hours
Timer Type	Mechanical
Programming Features	Daily Programming, Multiple Segments, Precise Scheduling

Applications

Ideal Applications

- Lighting Automation
- Heating Control
- Electrical Appliance Management
