

24-Hour Mechanical Timer Switch

This mechanical timer switch enables automated control of electrical devices. It operates on a 24-hour cycle, offering multiple on/off settings adjustable via tappets.

Product Overview

Reliable 24-Hour Automation

The TH-187 is a robust mechanical timer switch engineered for precise automated control of electrical devices. Featuring a user-friendly 24-hour cycle dial, it allows for multiple programmable on/off settings to suit diverse residential and commercial applications. The durable housing and protective cover ensure consistent, reliable performance in various operating environments.

Technical Specifications

Cycle Duration	24 hours
Adjustment Method	Adjustable tappets

Key Features

Key Features	24-Hour Cycle, Mechanical Control, Protective Cover, Robust Housing
--------------	---

Application

Common Applications

- Lighting control
- Appliance scheduling
- Residential electrical equipment
- Commercial electrical systems
