

24-Port UTP Cat.5e Patch Panel

This 24-port UTP Cat.5e patch panel is designed for structured cabling systems. It provides a reliable and high-performance solution for connecting network devices in data centers, telecommunication rooms, and office environments.

Product Overview

Professional Connectivity Solution

This 24-port UTP Cat.5e patch panel is designed to provide a robust and high-performance solution for structured cabling systems. It is engineered to facilitate reliable network connectivity in demanding environments, including data centers, telecommunication rooms, and office infrastructure. The unit supports both T568A and T568B wiring schemes, ensuring compatibility with standard networking requirements for an organized and efficient installation.

Technical Specifications

Category Type

Cat.5e

Port Count

24

Supported Wiring Schemes

T568A, T568B

Media Type

UTP (Unshielded Twisted Pair)
