

24ST Water Pump Pressure Tank

This compact pressure tank is designed for use with water pumps in agricultural and irrigation systems. It helps maintain consistent water pressure, reducing pump cycling and extending pump life.

Product Overview

Professional Water Pump Pressure Tank

The 24ST pressure tank is a high-quality accessory engineered to enhance the performance of water pump systems. By maintaining consistent water pressure, this tank effectively minimizes pump cycling, which significantly extends the overall service life of your equipment. Its durable construction and compact design make it an ideal choice for agricultural irrigation, domestic water systems, and pressure boosting applications where installation space is limited.

Technical Details

Model	24ST
Key Functions	Pressure Stabilization, Reduced Pump Cycling, System Longevity

Application Areas

Suitable Applications

- Agricultural irrigation systems
- Domestic water supply
- Water pressure boosting

Design Features

Design Highlights

Compact Size • Pre-charged Air Bladder • Durable Construction
