

24V Electric Bicycle Controller

This electric bicycle controller is designed for 24V systems. The controller is housed in a ribbed aluminum casing for heat dissipation and durability.

Overview

RKD24 Series Controller

The RKD24 series electric bicycle controller is a robust component engineered specifically for 24V electrical systems. Housed in a ribbed aluminum casing, it ensures efficient heat dissipation and long-term durability under operational stress. This unit is designed to precisely regulate electrical power, providing reliable motor performance management for electric bicycle applications.

Technical Specifications

Rated Voltage

24 V

System Voltage

Housing Material

Ribbed Aluminum

Design Features

Heat Dissipation, Durability, Multi-wire Connectivity

Primary Application

Electric Bicycles
