

24VDC Intermediate Relay with Surge Protection

This intermediate relay operates on a 24VDC power supply and provides surge protection. It is designed for reliable switching performance in control panels and automation systems.

ADDITIONAL IMAGES

Overview

Reliable Switching with Surge Protection

This intermediate relay is engineered for robust performance in industrial control panels and automation systems. Operating on a 24VDC power supply, it features built-in surge protection to safeguard sensitive electronic circuits from voltage spikes. The unit is housed in a transparent casing, allowing for easy visual inspection of internal components during operation.

Technical Specifications

Coil Voltage	24 VDC
Rated Current (AC)	10 A
Rated Voltage (AC)	250 VAC
Rated Current (DC)	10 A
Rated Voltage (DC)	30 VDC

Features

Key Features

- Integrated surge protection
- Transparent housing for visual inspection
- Circuit diagram printed on relay body
- Compact design for space-constrained panels

Compliance

Certifications	CE
