

2500 TPD Cement Production Line EPC

This project provides a full suite of services for establishing a cement production line. It includes engineering design, construction, equipment procurement, and production line commissioning.

Project Overview

2500 TPD Cement Production Facility

This comprehensive EPC project delivers a full-scale cement production line with a daily capacity of 2500 tons. The scope encompasses the entire lifecycle of the facility, including engineering design, geological investigation, equipment procurement, and installation. Designed for high-altitude operations, this turnkey solution integrates mechanical, electrical, and automation systems for seamless production commissioning.

Technical Scope

Scope of Work

- Engineering design technology service
- Geological investigation
- Construction and installation
- Machine, electricity, and automation procurement
- Water supply and drainage equipment
- Production debugging and commissioning

Operational Environment

Average Elevation	2200 m
Geographic Context	Southwest plateau region
